To our patients,

Vernon and Waldrep OBGYN Associates has adopted the latest national insurance industry regulations to standardize our billing practices. These changes apply to the Well Woman Visits and your regular office visits.

The Well Woman Visit is designed to mainly address your sexual and reproductive health. During a well woman exam, you might receive a pelvic exam, a Pap test, and a breast exam. You might also talk about family planning or your risk for sexually transmitted infections.

The Well Woman Visit is usually fully covered under preventative care and your insurance will approve one visit per year. Please refer to your insurance policy to verify that preventative care is covered. Vernon and Waldrep OBGYN Associates wants to make you aware that a copay and coinsurance may apply if other medical conditions are addressed during this visit. Also, your physician might ask to schedule a separate appointment to address your concerns if there is time limitation.

If you have billing questions regarding your visit you can contact our billing department.

Our goal is to provide comprehensive medical care that complies with the industry standards and best medical practices.
